

Our Fireworks Story and Plan

We are Alison and Trevor. This year, our family is making a plan for the big fireworks display.

A firework is a container that is filled with combustible materials that explode into bright colors the night sky. Many people think that fireworks are pretty and fun to see. That's why there is often a big crowd that gathers to watch them. Fireworks technicians, called firework pyrotechnics, have a license to light the fireworks for everyone to see. They work to keep fireworks displays safe for people to see.

Fireworks make very loud sounds soon after the fireworks technicians light them, and quieter sounds as the colors fade and disappear in the sky. For many people and animals, many of the sounds are uncomfortable. Our plan will help to make fireworks sounds more comfortable.

We have choices and may think of more. Here are three of them:

1. We may watch fireworks at home on television.
2. We may watch fireworks farther away from other people.
3. We may watch fireworks at the park with many other people.

Some people who watch fireworks wear noise-cancelling headphones. The headphones make noises softer, and often help to make the sounds of the fireworks more comfortable.

Together with mom and dad, we may talk about our fireworks choices. If we have other ideas, we can list them on the lines below.

Our family will try to make a comfortable plan for the fireworks. We have a place to write and sign our fireworks plan on the next page.
