

How to Build a Snowman

This is a story about how to build a snowman.

It's easiest to build a snowman out of "good packing" snow that sticks together well. A snowman is made of three balls made of snow in three sizes, small, medium, and large. The large ball is placed on the bottom, the medium ball is next, and the small ball goes on the top. Snowman balls are heavy. Adults can help.

Most snowmen have a face. Sometimes rocks, charcoal, or buttons are used for eyes with a carrot for a nose. Sticks may be used for arms. Some snowmen wear a scarf or a hat.

If it stays cold outside, snowmen can last a long time. Snowmen melt when it gets too warm.
